

IN THE CLAIMS

Claims 1-24, 26-35 and 37-40 were previously cancelled. Claims 25 and 36 are currently amended. Claims 41-43 are carried forward, all as follows.

Claims 1-24 (Cancelled)

25. (Currently Amended) A processing device of a web-fed printing press comprising:

at least first and second unreeling devices adapted to unwind previously imprinted, and rewound at least first and second webs of material;

a separate position-controlled electric drive mechanism for each of said at least first and second unreeling device;

a control device adapted to control each said separate position-controlled electric drive mechanism-mechanisms for each of said at least first and second unreeling devices to maintain registration of said at least first and second unwound, previously imprinted and rewound webs of material as said at least first and second previously imprinted and rewound webs of material are unwound by said at least first and second unreeling devices;

a draw-in unit arranged downstream, in a direction of web travel, of each of said at least first and second unreeling devices-device;

a longitudinal web cutting device arranged directly after each said draw-in unit in said direction of web travel and usable to selectively cut each of said at least first and second webs of material into partial webs;

a turning bar arrangement located after each said longitudinal web cutting device and adapted to mix said partial webs; and

at least one former, at least one transverse cutting device and at least one transverse folder after each said turning bar arrangement and each adapted to produce a printed product put together from said registered-unwound, previously imprinted and[[,]] rewind webs of material which have been unwound from said at least first and second unreeling devices by said separate position-controlled electric drive mechanisms for each of said at least first and second unreeling devices and selectively cut into said partial webs.

26-35. (Cancelled)

36. (Currently Amended) The processing device of claim 25 wherein said at least one former is centered on an uncut one of said unwound, previously imprinted, rewind webs of material web, and a second former, said second former being centered on one of said-a partial unwound, previously imprinted, rewind webs-web of material cut by said longitudinal web cutting device.

37-40. (Cancelled)

41. (Previously Presented) The processing device of claim 25 wherein said web-fed printing press is a 16-page printing press.

42. (Previously Presented) The processing device of claim 25 wherein said printed product produced from said unwound, previously imprinted, rewound webs has 32 pages.

43. (Previously Presented) The processing device of claim 25 wherein said web-fed printing press is a jobbing printing press.
